Patent NO. US202002277A1

GENERAL INFORMATION:

APPLICANT: Maliszewski, Charles R.

APPLICANT: Gayle III, Richard B.

APPLICANT: Price, Virginia L.

APPLICANT: Price, Virginia L.

TILE OF INVENTION: Inhibitors of Platelet Activation and Recruitment

FILE REFERENCE: 2879-US

CURRENT APPLICATION NUMBER: US/09/835,147

CURRENT FILING DATE: 2001-04-13

PRIOR APPLICATION NUMBER: US 60/104,585

PRIOR PLING DATE: 1998-10-16

US-10-646-308-30

US-10-646-308-30

Sequence 30, Application US/10646308

Publication No. US2004013692A1

GENERAL INFORMATION:
APPLICANT: BURTON, Paul B. J.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATING CARDIOVASCULAR DISEASE
FILE REFERENCE: 343-8

CURRENT FILING DATE: 2003-08-21

PRIOR PPLICATION NUMBER: --to be assigned--
PRIOR FILING DATE: 2003-08-12

PRIOR FILING DATE: 2003-08-12

PRIOR FILING DATE: 2003-08-12

PRIOR SEQ ID NOS: 36

SOFTWARE: Patentin version 3.2

LENGTH: 510

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ; Sequence 55, Application US/09557800C; Patent No. 6476211
```

```
GENERAL INFORMATION:
APPLICANT: BEAUDOLIN, Adrien R.
APPLICANT: BEAUDOLIN, Jean
TITLE OF INVENTION: ATP-DIPHOSPHOHYDROLASES, PROCESS OF PURIFICATION
TITLE OF INVENTION: THEREOF AND PROCESS OF PRODUCING THEREOF BY RECOMBINANT
TITLE OF INVENTION: TECHNOLOGY
FILE REFERENCE: ATP-DIPHOSPHOHYDROLASES-BEAUDOIN
CURRENT APPLICATION NUMBER: US/08/930,921B
CURRENT FILING DATE: 1998-01-02
EARLIER APPLICATION NUMBER: PCT/CA96/00223
EARLIER PILING DATE: 1996-04-10
NUMBER: OF SEQ ID NOS: 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         377

; Sequence 11559, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
    APPLICANT: VEWTER, J. Craig et al.
    TILE OF INVENTION: POLYWORPHISMS IN KNOWN GENES ASSOCIATED
    TILE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
    TURENT PELICATION NUMBER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14

apyrase (EC 3.6.1.5) precursor - potato

N.Alternae names: adealypyrophosphatase; ATP-diphosphohydrolase
C;Species: Solanum tubercoum (potato)
C;Daec: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 09-Jul-2004

C;Daec: 10-May-1996 #sequence_revision of a soluble ATP-diphosphohydrolase (Apyrase)
C;Daec: 10-May-1996 #sequence_revision of a soluble ATP-diphosphohydrolase #status predicted of Comment: This enzyme belongs to a family of E-type ATPases, and it catalyzes the hydro-cenzyme has mucleotide substrate specificity, divalent cation requirement, and insensition of the farch synthesis.
C;Gament: This enzyme belongs to a family of E-type ATPases, and it catalyzes the hydro-cenzyme has mucleotide substrate specificity, divalent cation requirement, and insensition of the farch synthesis.
C;Gament: This enzyme belongs to a family of E-type ATPases, and it catalyzes the hydro-cenzyme has mucleotide substrate specificity, divalent cation requirement, and insensition of Superfamily: nucleotide binding #status predicted <TMM>
F;13-454/Product: ATP-diphosphohydrolase #status predicted
F;44-65/Region: actin-heat shock protein 70-hexokinase beta-phosphate binding
F;130-212/Region: actin-heat shock protein 70-hexokinase pamma-phosphate binding
F;130-222/Region: author-heat shock protein 70-hexokinase gamma-phosphate binding
F;131-262/Binding site: carbohydrate (Ann) (covalent) #status predicted
F;131-262/Binding site: carbohydrate (Ann) (covalent)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       283 -YKVKAPKKG------SSWKRCRRLTRHALKINAKCNIEECTFNGVW----N 323

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A40732

Quanosine-diphosphatase (EC 3.6.1.42) - yeast (Saccharomyces cerevisiae)

NyAlternate names: protein YEL042w

C;Species: Saccharomyces cerevisiae

C;Species: Saccharomyces cerevisiae

C;Date: 21.5ep-1993 #sequence revision 18-Nov-1994 #text_change 09-Jul-2004

C;Accession: A40732; B40732; B30837; S50502

R;Abeljon, C.; Yanagisawa, K.; Mandon, B.C.; Hausler, A.; Moremen, K.; Hirschberg, C.B.;

A;Title: Quanosine diphosphatase is required for protein and sphingolipid glycosylation

A;Reference number: A40732; MUID:93308137; PMID:8391537

A;Accession: A40732.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A;Cross-references: UNIPROT:P32621; EMBL:L19560; NID:g349392; PIDN:AAA34656.1; PID:g3493

Biol. Chem. 275:2057-2062(2000).

- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotidaes to regulate purinergia neurotransmission. Could also he implicated in the pervention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

- GARALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

- COPACTOR: Requires calcium and magnesium.

- SUBCELLIAGE LOCATION: Integral membrane protein (Potential).

- ALTERNATIVE PRODUCTS:

- Event=Alternative splicing; Named isoforms=3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PTM: The N-terminus is blocked.

MISCELLANEOUS: Optimal pH is 7.0-7.5 with ATP as substrate and 7.5-8.0 with ADP.

SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.

J. Biol. Chem. 271:33116-33122(1996).
I. FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could als be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.
I. CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.
II. CORACTOR: Requires calcium and magnesium.
III. SUBUNIT: Homodimer; disulfide-linked (By minlarity).
II. SUBCELLULAR LOCATION: Integral membrane protein (Potential).
II. SIMILARITY: Belongs to the GDAl / CD39 NTPase family.

                                                                                                                                 Lewis-Carl S., Kirley T.L.;

"Immunolocalization of the ecto-ATPase and ecto-apyrase in chicken gizzard and stoomach. Purification and N-terminal sequence of the gizzard and stoomach. Purification and N-terminal sequence of the stoomach ecto-apyrase.";

"J. Biol. Chem. 272:23645-23652(1997).

"J. Biol. Chem. 272:23645-23652(1997).

"Inclorides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyses ATP and ADP equally well (By similarity).

"J. CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

"J. CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

"J. SUBCELLULAR LOCATION: Integral membrane protein (Potential).

"J. STMILARITY: Belongs to the GDA1 / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TKYGLVPDAGSTHTALYVYQWPADKENGTGIVSQVESCTVNGSGISSYADDPAGAGASIK
